

E.02 City Scene

Create a 5 seconds animation (infinite loop) of a city scene. The goal is to make it as much "alive" as possible. Think of what kind of city you will be making and the elements that compose it: buildings/houses, geography, streets, fauna, flora, people, transportation, etc.

Important topics to be explored:

- Design
- Keyframing
- Easing
- Motion Path
- Masking

Steps:

1. Design the scene
2. Import the artwork into After Effects as a composition (with layer sizes)
3. Open the composition in AE and animate the project using the techniques covered in class
4. Render as a 5 sec movie

Due: Feb 7th
